

To whomsoever concern

Imperial Engineering Education is seeking accreditation from TEQSA for two new Bachelor of Technology Courses, Bachelor of Engineering Technology (Renewable Energy) and Bachelor of Engineering Technology (Advanced Manufacturing). The courses will operate in South Australia at Regency College of TAFE.

A priority in Imperial's vision is to be a leading provider of engineering higher education that provides quality outcomes and gives students the skills and knowledge required to succeed and position itself as a provider of choice. Imperial is focussing on a niche but growing section of the market and aiming to meet industry needs.

ElectraNet Pty Limited recognises the value of the new higher education courses, Bachelor of Engineering Technology (Renewable Energy) and Bachelor of Engineering Technology (Advanced Manufacturing) and considers it will contribute to the skill gaps in these industries. It will support the state's economic vision, by providing skilled Technical Engineer Graduates.

Applying a Workplace Integrated Learning model, industry specific projects and case studies in its methodology students have an opportunity to gain the theoretical and practical skills that the engineering industry is seeking.
